12 OR 16 WEEKS*

WHO ARE THEY FOR?

Adults who have hepatitis C genotypes 1, 2, 3 or 4 and a Medicare Card

⁺ Most people have no or very mild side-effects ^{*} For most people, treatment is usually taken for 12 weeks

Note: People with genotypes 5-6 may be treated with Sofosbuvir taken with Pegylated Interferon and Ribavirin treatment. They have more than a 90% chance of cure. Some people who have been treated previously may need to take Ribavirin as well.
